PLANNING, BUILDING, AND PLANTING  
YOUR PERFECT OUTDOOR SPACE

EDITOR-IN-CHIEF CHRIS YOUNG

#### ^ BEDROCK OF DESIGN

Like a geological phenomenon, these angled layers of red sandstone rise out of a pond and are juxtaposed with dry, Mediterranean planting combinations with glaucous foliage.

#### < SOLID SEATING

A touch of the domestic interior is brought to this outdoor terrace, with its concrete seating and coffee table. Planting softens the effect in specific places.

#### > WATER AND EARTH

Water gently cascades over this shallow plate, cantilevered from a rendered wall, and into the trough below. The structure's warm earth-tones glow in the sun.

#### >> DIVING IN

In this small section of a much larger, compartmentalized garden, by US landscape designer Michael Schultz, thin metal "snakes" wriggle between paving and into a pond.
